# MANUAL

## Installing the rivet

Choose the nosepiece corresponding to the diameter of the rivet to be set (nosepieces are stored under the collecting bowl)

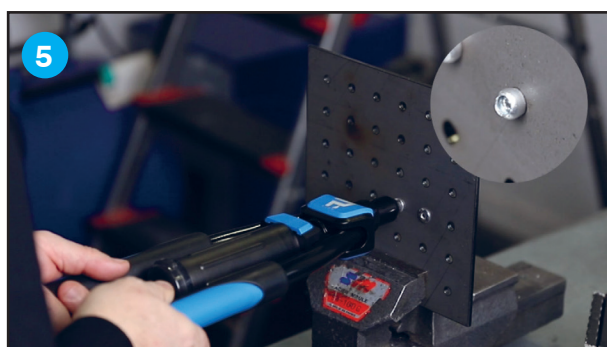

Screw the nosepiece onto the nosepiece holder on the tool until it stops (key provided)

Fully spread the gripper arms

Insert the rivet mandrel into the nosepiece of the tool and the body of the rivet into the hole of the material to be assembled

Close the arms of the pliers to set the rivet. Repeat the operation if necessary until the rivet mandrel breaks.

After breaking the mandrel, hold the tool vertically and spread the arms to release mandrel into the collector.
